In frame of a binational ANR funded project a technician/engineer position is available for 12 months to address the roles of the extracellular matrix molecule tenascin-C in non alcoholic fatty liver disease. This project is performed in a consortium with researchers in France (P. Gual, Nice) and Germany (V. Orian-Rousseau, KIT Karlsruhe, D. Grimm, Heidelberg, O. Schilling, University Freiburg).

The Tumor microenvironment group is looking for a highly motivated candidate who is willing to work independently but in close collaboration with team members on the advertised project that involves murine disease models, and technologies in cell biology and biochemistry.
